Hardware: IoT · Power Systems · Infrastructure · Soldering/Fab

Docs: MS Office/G Suite · Visual Explanations · BRD/FSD Writing · Technical Writing

Design: UI/UX · Branding · Graphic Design
Employment

Senior Frontend Engineer — Macy's — 2016 to 2020

Developed and designed the presentation layer of Macys.com for marketing and sales initiative pages supporting a weekly release cycle. Cross-functional role that required strong verbal and written skills to deliver the final phase of the creative release process to the web. Ensured brand guidelines were delivered with pixel perfection for a number of external merchants including Apple and Fitbit. Fullstack role focused on performance, scalability, accessibility, and SEO. Excelled in the position by removing tech debt and standardizing componentization of commonly used code patterns.

Frontend Engineer — VISA — 2015 to 2016

JavaScript Ninja using the weapons of HTML/CSS/JS to slice through the presentation tier for high traffic, consumer-facing applications while thinking about site speed, user experience, product strategy, and the health of the codebase. Battling large JavaScript applications with deep knowledge of casting browser assets spells to vanquish slow site speeds, AJAX bottlenecks, and sloppy stylings. Vigilant about the latest design and development trends from tablet, mobile, HTML5, CSS3, JavaScript evolution, responsive design, accessibility, site performance, progressive enhancement, semantic markup, and cross-browser development.

Jr Developer/Designer — ECATS Information into Insights — 2013 to 2014

Wrangling 911 lookup data from unstructured to structured data by writing complex regular expressions. Writing DML SQL scripts to deploy system configurations. Manually syncing data and configurations from production to development environments using the BCP-utility of SQL Server and Redgate SQL Data (Compare). Assessing data to measure accuracy, integrity, completeness, usefulness, and freshness using C#, Python, and SQL Server combined with subject matter expertise (SME) of telco infrastructure, specifically the routing of 911 calls.

Technical Writer — MES TECH INTERNATIONAL — 2012 to 2013

Wrote and edited user-facing documentation using Microsoft Word and Powerpoint in accordance with DoD style guides and preferences. Photographed products using lean-lightbox techniques and edited in Adobe Photoshop to obscure proprietary implements. Interfaced with engineers to achieve factually accurate documentation. Created HTML5 compliant computer-based training using Adobe Captivate. Performed quality assurance of hardware and software products, with a focus on consistent vernacular and system labeling.

Testimonials

"Evin is an incredibly passionate and talented engineer. She cares about and looks for solutions to problems rather than dwelling on the problems themselves. She is a wonderful team player who will immediately energize and better those with whom she works. She is a valuable member of any project and company."

-Brian Armstrong
Lead at Visa

"Evin and I have collaborated on multiple projects, she consistently delivers results that far exceed the expectations of the client. Whether there is a time crunch or a client that can't reach a decision she ensures that all the options are made known and succulently explains the risks versus the benefits."

-Nathan Fry
Freelance Client

"Evin takes immense ownership and accountability - solving problems, collaborating with external teams, taking a problem to a solution. She has been a mentor the rest of the team and has nurtured her Technical and soft skills to effectively solve a challenge."

-Malathi Subbiah
Manager at Macy's
